

Anticoagulants

1. Make a table describing the mechanism of action, indications, half-life, renal metabolism, and reversal of the following anticoagulants.
 - a. Warfarin
 - b. Dabigatran
 - c. Argatroban
 - d. Bivalirudin
 - e. Apixaban
 - f. Rivaroxaban
2. Describe the peri-procedure management of the patient on anticoagulants. List the procedures that can typically be performed on anticoagulation. Describe which who requires bridging and the procedure for bridging anticoagulation for each of the above agents.

List the anticoagulation recommendations for mechanical and prosthetic valves in the aortic and mitral position
