

Objectives 5/25/2021

Lupus

1. Describe several symptoms and exam findings (by organ system) that should prompt clinicians to consider a diagnosis of lupus.
2. Know the ACR criteria for SLE.
3. Know the appropriate laboratory evaluation for SLE and the sensitivity and specificity of anti-double stranded DNA antibodies and anti-Smith antibodies.
4. List several medications used to treat lupus (by organ system) and their common side effects.
