

September 27, 2016 AHD Objectives

The Hypercoagulable Patient:

1. List 5 inherited conditions and 5 acquired conditions that result in increased risk of thrombophilia and discuss their relative risk of thrombosis.
2. Define an unprovoked venous thrombosis event and describe the appropriate evaluation.
3. Discuss the recommended duration of anticoagulation for a first provoked clot and first unprovoked clot.
4. Describe the available tools that can help estimate the risk of recurrence of VTE.
5. Know the indications for subcutaneous heparin and novel oral anticoagulants for the outpatient treatment of VTE and their contraindications.
